

## Job Opening: Full-time Manager Engineering & Design at Ocean Grazer BV

Are you seeking an inspiring challenge in your career, with extensive experience in developing innovative products? Do you have a background in civil and/or maritime industries and want to play a key role in the development of a groundbreaking solution for energy storage? Ocean Grazer is the place where your passion for technology, design, and sustainability converges.

### The Company:

Ocean Grazer is a young company specializing in the development of energy storage systems for offshore wind farms. Our revolutionary Ocean Battery, inspired by traditional Pumped Hydro Storage (PHS), has already received prestigious awards, including a Best-of-Innovation award from CES Las Vegas. In collaboration with RWE, we have won the tender for the HKW-VII wind farm, and the industry eagerly awaits the results of our first demonstration projects. We are looking for an enthusiastic colleague to join our team and lead the development of this product.

To realize our ambitions, we operate within an international network of companies, institutions, and organizations, striving for (cultural) diversity within the team. This enables us to easily bridge gaps with other cultures, norms, regulations, and practices.

### What will you do?

As an experienced Manager Engineering & Design at Ocean Grazer, you will be the driving force behind the development of the Ocean Battery. You will lead the design team, oversee the development, and chart a clear development path for each subsystem. With your multidisciplinary skills, you will successfully combine knowledge, processes, and partners into an efficient development process. Planning, resource management, risk management, and reporting are among your essential tasks, where you keep expectations clear and motivate the team.

### Who are you?

As a driven Manager Engineering & Design at Ocean Grazer, you are the beating heart of our innovative mission. Your strong leadership qualities go beyond just managing a team; you inspire, set goals, and ensure effective communication within the team. You excel in excellent communication skills, not only internally within the team but also externally with stakeholders, customers, and government agencies.

With 5-8 years of experience in civil infrastructure, preferably supplemented with knowledge of maritime and/or energy infrastructure, you are familiar with design and engineering principles. Your innovative mindset and problem-solving ability make you the architect of complex, innovative processes, and systems.

**Budgets are not just numbers for you; you manage them effectively, provide accurate cost estimates, and keep costs closely monitored. Your sustainability drive goes beyond the norm. You don't just aim for sustainable energy integration; you strive for sustainability in every step of the Ocean Battery's reality.**

**You are not just a Manager Engineering & Design; you are a visionary leader shaping the future of energy storage. Join Ocean Grazer and let your passion be part of our team taking the energy transition to new heights.**

### **Ready for this new challenge?**

**Contact Marinya Govers by phone at +31 (0)6 11 25 04 73 or via email at [marinya@oceangrazer.com](mailto:marinya@oceangrazer.com). We look forward to receive your motivation letter and CV.**
